

Abstract for Genetics Society of America should be in following form:

STOCKER, BRUCE and JOSHUA LEDERBERG, Lister Institute, London, Eng. and
University of Wis., Madison, Wis. Title . — Contents no more than 250 words.
No paragraph indentation; use --- for stop.

Suggestions

Titles: ?? Phenotypic (phenom^{ic}) transduction

Unilinear clones ; heredit^{ary} chains; unicate^{nate} clones

Incomplete, abortive, transduction

Contents: 1) Ref. trails. Do not need to define transduction, ~~needed for ref. trails~~
2) ultimate single chains: may be single flagella or ~~bl~~pharoplasts
3) multiple initial chains: interpretation for further study; E-gene
for purpose of discussion.

Can you squeeze much of this into 250 words?

I'm not sure whether this would just be put in "by title" or whether I would
actually present it for us; we probably will go to the meetings (at Lansing, Mich.)

Yrs

J
